Tara Delaney : 101 Games and Activities for Children With Autism, Aspergers and Sensory Processing Disorders before purchasing it in order to gage whether or not it would be worth my time, and all praised 101 Games and Activities for Children With Autism, Aspergers and Sensory Processing Disorders:

45 of 48 people found the following review helpful. GREAT resource for parents and care givers of kids on the spectrum!
By Kate Mahoney We have a 4 year old non-verbal boy on the spectrum and my husband especially has trouble knowing what to do with him and how to interact with him when they spend time together, since our son doesn't really pretend play and is extremely active. Since he can't communicate very well it can be very hard to play with and engage him. This book is just what I was looking for to help my husband, myself and our nanny come up constructive activities to do with him that are not only fun, but educational and interactive as well. When he's not in school the days can be very long. He has no interest in watching TV or movies whatsoever, which some might say is a good thing, but it can also make for some very long days sometimes and when he gets bored, no one is happy. This is a very well written book by someone who clearly knows what they're talking about. I love how it's divided up into helpful sections based on age and on what is appropriate for what types of children. What my husband likes about it is he doesn't have to sit and read the whole book, he can flip through it and find an activity (usually while he's in the loo) and try it with our son later. Super easy! I'm so grateful for people who use their experience and take the time to write books like this for parents like us who only have one child and that child has autism and sensory issues. Thank you!
2 of 2 people found the following review helpful. Something for everyone
By CJB This is becoming a great tool. It's filled with an assortment that allows enjoyment for all our students. All children with Autism have different needs and this book is quite suitable. Thanks a bunch.
3 of 3 people found the following review helpful. Great resource
By luvthosegators Book has great ideas in it - sort of helps take pressure off of you trying to come up with things on your own. This is good resource for parents that find themselves frustrated and wanting to provide the best for their kids. Would recommend this to al with special needs kids - especially sensory kids!

LEARNING THROUGH PLAY One of the best ways for children with autism, Asperger's, and sensory processing disorders to learn is through play. Children improve their motor skills, language skills, and social skills by moving their bodies and interacting with their environment. Yet the biggest challenges parents, teachers, and loved ones face with children on the autism spectrum or with sensory processing disorders is how to successfully engage them in play. Pediatric occupational therapist Tara Delaney provides the answer. In *101 Games and Activities for Children with Autism, Asperger's, and Sensory Processing Disorders*, she shows you how to teach your children by moving their bodies through play. These interactive games are quick to learn but will provide hours of fun and learning for your child. And many of the games can be played indoors or outdoors, so your child can enjoy them at home, outside, or on field trips. More than one hundred games that help your child: make eye-contact, stay focused, and strengthen his or her motor skills associate words with objects and improve language and numerical skills learn how to interact with others, how to take turns, and other social skills needed for attending preschool and school

About the Author Tara Delaney M.S., OTR, is the Executive Director of Steps Therapy Inc., specializing in sensory integration, autism, ADHD, learning disabilities, as well as social skills development.
