**Julian Laderman : A Bridge to Simple Squeezes** before purchasing it in order to gauge whether or not it would be worth my time, and all praised A Bridge to Simple Squeezes:

The author came up with some non standard terms which are ok in the context of his book. Just don't expect to see them used elsewhere. Since I am familiar with squeezes I found the book slow and tedious. Maybe new players would like it? I learned squeezes from David Bird's fabulous

Bridge Squeezes for Everyone. Terence Reese also has a good book on squeezes. I would recommend those 2 over this for all readers. Mike Lawrnces excellent Private Lessons 1 2 software also has some squeeze hands and you would be better off with that than this book.2 of 2 people found the following review helpful. The best book on squeezesBy Carol LauferI've read most of the books on squeezes - including all the "classics" - and this is the best I've seen. It breaks down squeeze play into terms that the everyman bridge player can understand and learn to apply. The author clearly has an appetite and a knack for explicating complex subjects. (If we're lucky, he'll take on the economy next.) Expert players have a huge advantage over the rest of us because they see and execute squeezes routinely. This book helps level the playing field; the serious reader will be armed with a weapon that previously seemed unattainable. There is a good reason the book was selected by the American Bridge Teachers Association as its book of the year.

In this book, learning to recognize and appreciate threat cards plays a central role as you begin to understand how squeeze play operates. It won't be long before you can look at a layout and begin to imagine how the East-West cards will need to lie in order for your squeeze to be successful. Very soon, you will get to the point where simple squeezes are a part of your regular bridge arsenal. The first edition of this book was named Book of the Year in 2006 by the American Bridge Teachers Association. DR. JULIAN LADERMAN is a retired mathematics and computer science professor (Lehman College, City University of New York).
