I never forgot the lesson learned from "Carpet Confusion". The book is divided into different sections such as geometry, logic, etc. Programmers will find several of the puzzles very interesting and relevant to algorithmic design. The book also has puzzles touching on number theory such as the Chinese remainder theorem and Euclid's algorithm. There are stick figure drawings that illustrate each puzzle. The format is that first an easy problem is given, and right after the answer. Then a tougher question along the same lines is posed to the reader. You turn over the page to see the explanation. This page usually has a theory discussion after an explanation of the answer and then some follow-up problems with answer in the back of the book. Great for getting the intellectual juices flowing, finding interview question ideas, boning up for the SATs, whatever,

Funny pictures and beautiful logic problems for children and adults.

Aha! Insight challenges the reader's reasoning power and intuition while encouraging the development of 'aha! reactions'.
