By Roger Farnham
From cover to cover (and printed on recycled paper) this book explains the environmental movement in great detail. Everything from the latest recycling technology to "green" funerals is included in this book. If you are at all interested in the planet Earth and what is being done to fight waste and pollution this is the book for you. If you are not particularly interested in ecology and the green movement then you will be bored.

Only Uncle John could make the Green Movement this much fun! This timely edition takes an even-handed look at the trials and tribulations (and downright goofiness) of environmentalism. You'll learn how landfills operate, where plastic goes to die, how to understand food labels, how to save some green around the house, and the lowdown on all the alternative forms of energy currently being bandied about (even beer power). And we cover the really important stuff, such as: Who has the bigger carbon footprint--Fred Flintstone or George Jetson? And lots more, including . . .
.Lady Bird Johnson's quest for a prettier nation
Whatever happened to the electric car?
Paper vs. plastic: A fight to the death
Not-so-green Hollywood movies
The true meaning of organic
Ancient environmentalists
Living on an Amish farm
NOISE POLLUTION!
Animals that recycle
The power of poo
And much, much more!
